

# CS 326-01 Processes and Pipes

Tag Campuswire posts

Project 01 - feedback

Lab 04 → Release today, due Tue Mar 21

---

Review

file descriptors

processes - `fork()`, `wait()`, `exec()`

redirection -

pipes - `pipe()`

---

# fork()

Parent

```
main() {  
    id = fork();  
    id = pid  
    of  
    child  
}
```

Child

```
main {  
    id = fork();  
    id = 0  
}
```

✓

K  
proc

```
pid = 13
```

```
pid = 14
```

# exec()

pid 17

```
main() {  
    id = fork();  
    if (id == 0) {  
        exec()  
    } else {  
        wait();  
    }  
}
```

pid 18

```
main() {  
    id = fork();  
    if (id == 0) {  
        exec('ls')  
    } else {  
        wait();  
    }  
}
```

ls

```
main() {  
    12 13 14  
}
```

K

FD TABLE → FD TABLE

# Redirection

```
id = fork()
```

```
if (id == 0) {
```

```
    [ manipulate the  
      fd table
```

```
    exec()
```

```
}
```

---

Pipes - a kernel buffer

int pfd[2]; ① Need to create pipe before fork()

→ pipe(pfd)

FDTABLE

0	stdin
1	stdout
2	stderr
3	•
4	•

read  
pfd[0]  
pfd[1]  
write

② Need to close off pipe fds not in use.

pipe.c
